

Jessica Brill

Jessica is a Scientist in the Environmental Stewardship group within the Global Product Stewardship organization at the Procter & Gamble Company.

Jessica serves as point of contact and expert on aquatic invertebrate and algal testing. Jessica leads P&G's internal testing capabilities as well as provides consultation and direct support for all studies placed externally. Responsibilities include data generation, development of methodology for difficult to test substances, evaluation of prototype products, whole product and mixture testing and providing regulatory expertise for key ingredients (e.g., REACH compliance). Jessica is a key member of P&G's polymer environmental safety program and is responsible for improving processes for assessing polymers and devising updated screening guidance for environmental safety. Externally, Jessica is involved in building capabilities and functional approaches for future P&G innovation needs (e.g. eco-TTC, Web-ICE). She is heavily involved in the Women of SETAC sub-committee and is a long-time SETAC member.
