Barnacle Goose Greenland population	Age ratio	Methodology	16032022

Age counts based on plumage characteristics conducted on Islay are used to help estimate annual productivity. Age counts are carried out annually on Islay between November and March. Data has focused on Islay previously as a result of the Islay Sustainable Goose Management Strategy and this being the main Scottish site for application of the shooting derogation. However, age counts are also carried out at other locations eg Tiree.

More information on the count method can be found here: <https://monitoring.wwt.org.uk/our-work/goose-swan-monitoring-programme/breeding-success/>
